

The
Woman's League

NFT Collection

The Woman's League NFT Collection

Pure art reflects our deepest thoughts, emotions, and dreams. It is a manifestation of our imagination and creativity, a means to express our passions and unique truths.

A Non-Fungible Token, or NFT for short, is the digital representation of an asset stored and transferred using blockchain technology. NFTs can represent various items, including paintings, music, sculptures, and other art forms.

The woman's league NFT collection is an electrifying mix of 500 stunning digital art pieces. Each of them was drawn by hand, and they are all unique; no two artworks have the same design.

Woman's league is an awe-inspiring display of artistic creativity and imagination. The entire collection radiates feminine sophistication, power, strength, drive, prudence, resolve, and passion. It is one of a kind.

The Moon Light Night project sponsors the Woman's League collection. Moon Light Night, or MLN for short, is a revolutionary blockchain platform that connects upcoming talented artists with art enthusiasts, art collectors, art investors, and other key players in the global art industry.

The platform leverages modern blockchain technology to provide all the tools these artists require to compete in the ever-changing art industry. Moon Light Night helps these artists generate income by minting and selling NFTs.

In other words, MLN helps upcoming artists build a reputation on the global scene, monetize their talent, and enjoy an improved quality of life.

NFTs ON THE XRP LEDGER

The Ethereum Blockchain network was the first network to support NFTs. On the network, NFTs can be minted, exchanged, and burned. However, during high traffic periods, the network can quickly become congested. The network congestion leads to sluggish speeds and sudden hikes in the transaction fees.

The XRPL is a blockchain-based payment processing platform that guarantees lightning-fast transactions (three to five seconds) and low transaction fees. In other words, it is a decentralized public blockchain that is fast, reliable, and energy-efficient.

The speed and lower transaction costs of the XRPL make it a more efficient alternative to the Ethereum network as a platform for NFTs. Minting, trading, and burning NFTs will be faster and cheaper on the XRPL. Additionally, the XRPL does not get congested like the Ethereum blockchain network; it can process thousands of transactions simultaneously.

The NFT industry is burgeoning, and its growth is coming to the XRPL ecosystem. In Sept 2021, the company behind the XRPL, Ripple Labs, released a \$250 million fund for developers, content creators, artists, and brands to develop and implement new use cases for the XRPL.

On January 12, 2022, RippleX released the XLS-20-based NFT-Devnet for users to test XRPL's blockchain's capacity for NFTs. Now, developers and other members of the XRPL community can mint NFTs for the first time on the blockchain.

Once all arrangements have been made, Ripple plans to launch an NFT marketplace where members of the XRPL community can mint NFTs, trade NFTs, and connect. MLN is built on the XRPL and is working on its NFT marketplace that will launch once NFTs are live on the XRPL.

ROADMAP

The woman's league NFT collection contains five hundred unique designs

- **The token airdrop event:** Here, we will airdrop \$NET tokens to complete trust lines under the condition that they have \$NET and hold at least fifteen Moon Light Night \$MLN tokens in their wallet.
- **Official Website:** We will also launch the woman's league NFT collection official website at our airdrop event. So, every woman's league community member can enjoy unfiltered access to all parts of the project moving forward.
- **Complete the creation of five hundred woman's league NFTs** while we await the official launch of MLN's NFT marketplace, where members of the woman's league community can trade their NET tokens for NFTs and vice versa.
- **Continue with creating more woman's league NFTs** after the successful sale of the first batch of five hundred woman's league NFTs.

As mentioned in the previous sections, the first batch of NFTs in the project comprises five hundred women's league NFTs, but we will release \$ NET tokens instead because the XRP marketplace is still in the works; we will release \$NET tokens instead.

The \$NET token is the stablecoin used as the default currency during airdrops and presale events for projects launched on the MLN platform. One \$NET token is equivalent to 0.01XRP.

ABOUT THE ARTIST

My name is Michelle.

Born and raised in Canada (far out in the country), I was lucky to be surrounded by a lot of nature and beauty growing up. My mother was an artist; she was always doing crafts and painting with my sister and me since we were old enough to hold a paintbrush. To this day, we often do arts and crafts together.

I studied art throughout school, and it stayed a strong presence in my life as a way of expression, meditation, creativity. I love to see creation and passion, whatever your form of creation is. I started experimenting with digital art and found out how much I love it! I couldn't stop creating artworks, and the unlimited possibilities inspired me.

I loved the idea of a collection based on the feminine essence, strength, and beauty; I believe that appreciating one another and lifting each other is key to happiness and healthy relationships.

I felt the strong urge to incorporate nature as I am deeply connected to it; I feel that nature keeps us grounded and adds beauty to our surroundings, inner self, and often brings us the opportunity to feel peace and reset our souls. Women have come a long way in history, and I am excited to celebrate with this collection!
